

# Simple Composting Toilet

By Mike Wilson

This was a simple composting toilet built from scrap 3/8" plywood. The seat and 5 gallon bucket that I ended up using was only \$9.27 after taxes. This project took 2 hours to put together, sand and lacquer. Overall this was a quick project, and if you have to buy a set of hinges, can of lacquer, and the plywood and nails, you can build this for less than US\$20.00. This can support my body weight of 212 pounds.
